VERSYS 1100-SE FEATURES

Smartphone Connectivity

Complementing the Versys 1000 S's TFT dashboard is a Bluetooth chip built into the instrument panel which enables riders to connect to their motorcycle wirelessly. Using the smartphone application “RIDEOLOGY THE APP,” a number of instrument functions can be accessed, contributing to an enhanced motorcycling experience.

TFT Full Colour Instrumentation

The compact all-digital TFT colour instrumentation gives the cockpit a high-tech, highgrade appearance. The high-grade full colour display features TFT (thin-film transistor) technology, delivering a high level of visibility. The screen’s background colour is selectable (black or white), and screen brightness adjusts automatically to suit available light. In addition to scrollable multi-function windows, two display modes offer riders a choice of how they want their information presented.

LED Cornering Lights

Lights built into the shrouds help illuminate the road when cornering at night. Each of the three lights has a fixed direction and is activated based on lean angle. As the bike leans over, the lights come on in order, creating a wider illuminated path in the direction the bike is heading.

KQS (Kawasaki Quick Shifter)

Complementing the Versys 1000 S’s exhilarating engine character, the model's standard equipment includes a quick shifter that enables clutchless upshifts and downshifts for seamless acceleration and quick and easy deceleration

Electronic Cruise Control

Kawasaki’s cruise control system allows a desired speed to be maintained with the simple press of a button. Once activated, the rider does not have to constantly apply the throttle. This reduces stress on the right hand when traveling long distances, enabling relaxed cruising and contributing to a high level of riding comfort.

In-Line Four Engine with Added Power

An increase in displacement from 1,043 cm3 to 1,099 cm3 gives the Versys 1100’s engine a boost in power from 120 PS to 135 PS. The more robust mid-range and increased high-rpm power contribute to increased comfort when cruising on the highway, facilitating long-distance touring. The climb from low through high rpm is even more exhilarating, while superb throttle response, strong torque at all rpm, and a seductive intake howl further contribute to riding excitement.

Fun to Ride: Versatile Performance for a Wide Rang

Both the Versys 1100’s engine and chassis were designed to maximise rider enjoyment on the street. Whether in town, exploring backroads or heading for the horizon, its In-Line Four engine delivers a rewarding surge of acceleration with every twist of the throttle—even more so with its increased displacement. The increase in engine performance is paired with excellent chassis balance and long-travel suspension settings enabling superb control and feedback while offering a high level of rider confidence in numerous street riding situations.

Emotional, Well-Integrated Design

The Versys 1100’s emotional design beckons the rider invitingly. The flowing styling features a clear line of colour traceable from the front of the bike to the rear. A balanced use of colour and materials emphasises the functional beauty of the bike’s individual parts and the sculpted bodywork shaped with rider comfort in mind.
